

CGL-LF: $t \in [6, 18]$; 6 time blocks

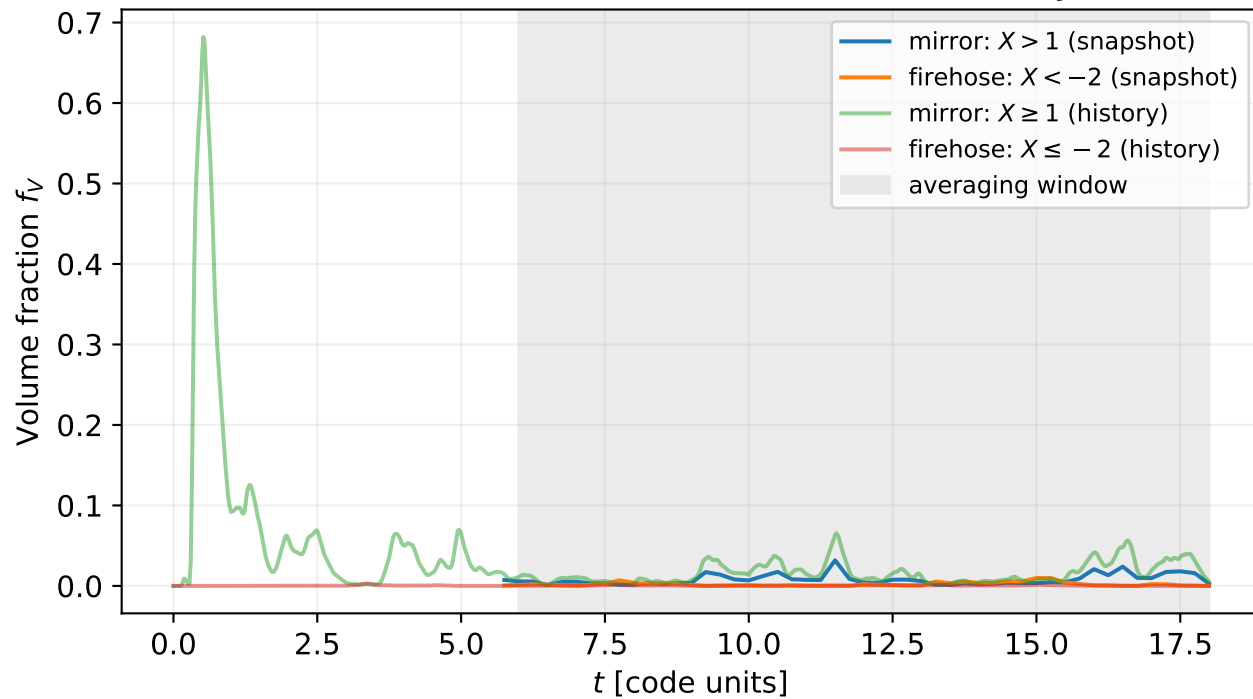

Magnetic-strength PDF

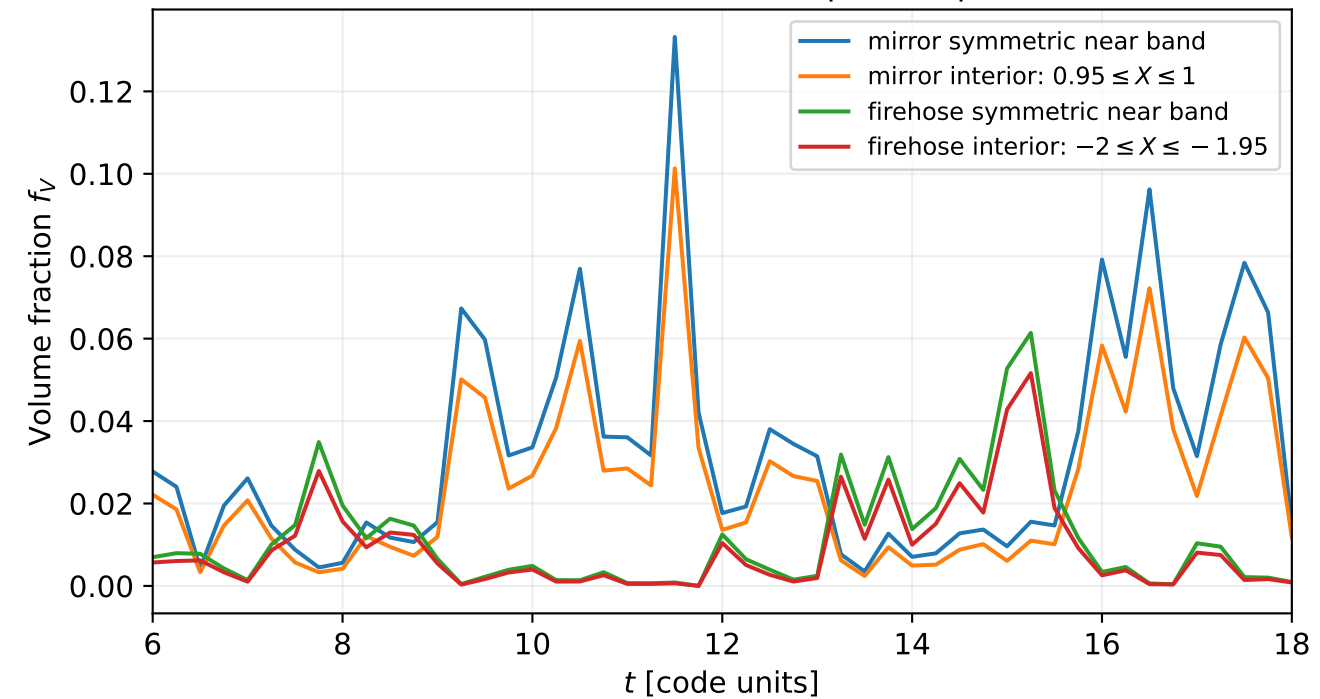

Pressure-anisotropy PDF

Threshold exceedance and inclusive history

Near-threshold residence: $|X - X_{th}| \leq 0.05$

PDFs: $\int P(q) dq = 1$; volume weighted; density per linear interval, even on logarithmic axes.

Zero-density bins and block-band portions touching zero are masked.

Shading shows time-block ranges; near residence is distinct from exceedance.
